

Acoustic Vision

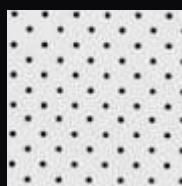

See it, Hear it, Love it!

Experience Home Cinema the way it was meant to be!

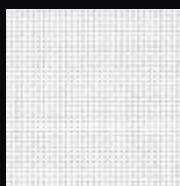

- No EQ needed
- Moir'e free guaranteed
- Accurate color response
- 1.16 gain - highest gain for a woven AT fabric
- Exclusive patent pending weave
- 0.20mm holes, smaller holes than micro-perf
- True acoustic transparency
- Zero sound distortion from your speakers
- No hot spotting
- 170 degree viewing angle
- Fire and flame retardant
- Mould and mildew resistant

Place your speakers behind the screen just like your local cinema. Localise the sound, sit back and get ready for something special!

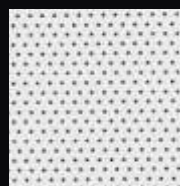

Acuvision's patent pending weave needs no EQ like perf screens. You can now enjoy the best image with the best sound with zero compromise. This was unheard of till now. Acuvision has a positive gain of 1.165 unlike other woven fabrics with negative gains as low as 0.8.

Perforated fabric

Acuvision

Microperforated fabric

Perforated fabrics use 1mm wide holes which is not suitable for Home Theatre applications. Micro perf fabrics use .5mm wide holes which can create what is known as The Moir'e effect when viewing the screen in action.

Acuvision uses .2mm wide holes on a specially coated woven fabric to produce a positive gain and eliminates the Moir'e effect whilst accurately reproducing your speakers true sound quality.

A true audio transparent fabric that does not alter the sound of your speakers or comb filter audio like a perforated screen will.

Acuvision is exclusive to Oz Theatre Screens and is only available with the Majestic Fixed Frame Screen.
